

## TGC – Card Templates and Proportions

### Template Proportions

We print at 300 dots/pixels per inch, which means that if you are designing an image that is 3 inches wide, then it will be 900 pixels wide.

Our cut lines are 1/8" from the edge of the image for square items like cards, which means that they are 37 pixels ( $300 \times 1/8 = 37.5$ ) from the edge.

Likewise, the safe zone on such images is 1/4" from the edge, or 75 pixels ( $300 \times 1/4 = 75$ ) from the edge.

### Tarot Cards

Images used for tarot sized playing cards must be sized to exactly **900 x 1500 pixels**. This will result in a deck of standard size tarot cards with rounded corners and measurements of 2.75 inches by 4.75 inches. These are printed 10 to a sheet.

Note that all of our templates have an extra 1/8 inch bleed all the way around them, which brings the tarot cards to 3 x 5 inches. The final size of the physical cards is 2.75 x 4.75 inches, but the images have to be bigger than the final size of the cards so they can have a full bleed off the edge of the paper.

### Tarot Tuck Boxes

Tarot decks come in plastic bags by default, but we also allow designers to create their own custom tarot tuck boxes. A tuckbox is 3000 x 2475 pixels.

Shop Advertisement – 180 x 125 pixels

Shop Backdrop – 1600 x 600 pixels

User/Designer Logo/Avatar – 300 x 300 pixels

Game Logo – 350 x 150 pixels

Action Shots – no dimensions or requirements
